.... For children too young to be vaccinated it is important to follow proven COVID-19 precautions such as mask wearing when in public, indoor places to reduce the chance of becoming infected with the coronavirus. Parents and caregivers should understand that children infected with the coronavirus can develop complications requiring hospitalization. ...

Claim: Adhering to COVID-19 precautions, such as **mask-wearing and encouraging breastfeeding**, can be crucial for safeguarding young children, as studies suggest protective antibodies in breast milk may offer potential protection against COVID-19, despite the rarity of severe infections in newborns.

MetaSumPerceiver

Generated summary for fact checking: For young, unvaccinated children, adherence to proven COVID-19 precautions, including mask-wearing in public, is essential to minimize infection risks and potential complications. Encouraging breastfeeding, with its protective antibodies, may offer defense against COVID-19, akin to the proven efficacy of antibodies from other vaccines administered during pregnancy. ...
